USAGE GUIDELINES FOR THE SWIFT SLIDER:

- Ensure brakes of bed are on.
- Place pillow at head of bed to avoid accidental head injury.
- Place Swift on bed with low-friction taffeta panel down; place incontinence pad on top of Swift (if needed).
- Position patient/resident centrally on entire Swift surface. The central panel should support patient/resident from neck to just below the buttocks.
- Bend patient/resident’s knees to protect heels from being dragged across linens.
- Lower the side rails and raise the bed to almost elbow height of the shorter caregiver.
- There should be a caregiver on each side of bed. Each holds Swift with two hands—one at shoulder height and one at hip height.
- To move patient/resident, gather Swift as close as possible to patient/resident.
- Reposition by laterally shifting body weight.
- Once patient/resident is repositioned, smooth out sliding sheet and tuck flaps securely under mattress.

Please remember:
- We strongly advise against using Swift for lifting.

Conclusion: Swift UltraSlide System reduces the force required to reposition a patient/resident in bed by 60%, therefore reducing the overall strain on the caregivers.

USAGE GUIDELINES FOR SWIFT ULTRASLIDE SYSTEM: 
• Place UltraSlide over mattresses, as you would a normal fitted sheet 
• Place Swift across UltraSlide, with blue sides facing each other 
• Position Swift so that it supports shoulder to hip area 
• Reposition patient/resident using appropriate protocol (refer to usage guidelines for Swift) 
• Once you’ve positioned patient/resident’s hips to appropriate area, tuck in Swift to keep from sliding 

Note: 
• If head of bed needs to be elevated, raise knee gatch to prevent patient/resident from sliding down mattress 
• Position patient/resident’s hips in bend of bed if hips go above that zone, patient/resident will slide down by force of gravity

The Swift UltraSlide System

Swift UltraSlide System

MIP recognizes that manual repositioning exposes caregivers to increased risk of neck, shoulder, and back injuries. That’s why we have developed the Swift Slider, a cost-effective, low-friction taffeta repositioner intended to allow caregivers to safely and easily perform handling tasks with little physical strain.

Implementing the standard use of this repositioner will create a safer healthcare environment for caregivers, ensure the comfort and security of patient/residents, and support your no-lift policy!

Our breakthrough Whootex 100% synthetic surface outperforms all other sliders

Features:
- 4 colour process: Red, Yellow, Green, Blue
- Soft hand feel
- No pilling
- Unique stain release
- Shrinks evenly
- No bleeding
- Carbon fibers reduce static build-up
- Unique, stretch UltraKnit construction provides a soft hand feel
- Durable, 100% synthetic fabric ensures quick drying and longevity in demanding environments
- Moisture vapor transmission rate (MVTR)/moisture vapor penetration rate (MVPD) 
  - In the standard bottom sheet
  - Hand wash/normal cycle
  - Style: Ultraslide

Pressure Mapping
Swift’s thin profile should not impair the performance of pressure redistribution mattresses, and can therefore remain beneath patient/residents at all times – so it’s always there when you need it.

Breathability reduces the risk of heat and moisture build-up under the patient/resident, enhancing comfort.

- Patients/residents not fully benefiting from the desired effects of their pressure redistribution surfaces due to unnecessary layering of products
- Patients/residents requiring assistance with bed mobility
- Healthcare facilities with budgetary constraints

Swift UltraSlide System

More than any other occupation or industry, nursing personnel file for the highest number of operational injuries related to back pain (National Institute for Occupational Safety And Health). In order to prevent such injuries, MIP has developed UltraSlide, a fitted bottom sheet modified with a low-friction panel down the center, to be used together with Swift. UltraSlide should be used when patients/residents have little or no mobility and require extensive or total assistance for repositioning in bed.

Used individually or together, the two parts of the Swift UltraSlide System reduce the force required to turn or reposition bed-bound patients/residents.

THE SWIFT ULTRASLIDE SYSTEM IS A BREEZE!

- Central low-friction panel significantly reduces resistance when used in conjunction with Swift
- Carbon fibers reduce static build-up
- Special, stretch UltraKnit construction provides a smooth surface and accommodates a wide range of healthcare mattress sizes
- Durable, 100% synthetic surface ensures quick drying and longevity in demanding environments
- Proper size should significantly reduce the risk of neck, shoulder and back injuries caused by repositioning
- Also available in bariatric and stretcher sizes

USAGE GUIDELINES FOR SWIFT ULTRASLIDE SYSTEM:

- Place UltraSlide over mattresses, as you would a normal fitted sheet
- Place Swift across UltraSlide, with blue sides facing each other
- Position Swift so that it supports shoulder to arm/shoulder or back, as result of lifting or repositioning
- Reposition patient/resident using appropriate protocol (refer to usage guidelines for Swift)
- Once you’ve positioned patient/resident’s hips in bend of knee gatch to prevent patient/resident from sliding down mattress
