USAGE GUIDELINES FOR THE SWIFT SLIDER:

• Ensure brakes of bed are on
• Place pillow at head of bed to avoid accidental head injury
• Place Swift on bed with low-friction, non-rubberized panel facing down; place incontinence pad on top of Swift if needed
• Place patient in a position that promotes good weight distribution
• Bend patient's knees to protect heels from being dragged across linens
• Ensure patient/resident is positioned correctly upon entry
• Reposition patient/resident before lowering bed
• Reposition patient/resident before raising bed

Please remember:

• We strongly advise against using Swift for lifting

MOVING IN THE RIGHT DIRECTION!

MOVING IN THE RIGHT DIRECTION!
and support your no-lift policy! 

Implement the standard use of this repositioner to create a safer healthcare environment for caregivers, ensure the comfort and safety of patients/residents, and support your no-lift policy.

Who is Swift for?

- Facilities dealing with staff injuries to arm/shoulder or back due to excessive manual lifting
- Patients/residents requiring assistance with bed mobility
- Patients/residents requiring assistance for repositioning
- Facilities dealing with staff injuries

Who is Swift for?

- Facilities dealing with staff injuries to arm/shoulder or back due to excessive manual lifting
- Patients/residents requiring assistance with bed mobility
- Patients/residents requiring assistance for repositioning
- Facilities dealing with staff injuries

**FEATUES & BENEFITS:**

- Quality surface specifically developed to provide patient/resident comfort and reduce the risk of shear and friction.
- Low-friction backing allows staff to reposition patient/residents safely and easily.
- Breathable taffeta backing avoids heat buildup under patient/residents.
- Generous sizing provides maximum support.
- Available in an assortment of sizes to meet the needs of a wider range of patients/residents and staff.

Note: The Swift Slider can be washed along with regular bed linens.

**PRESSURE MAPPING**

Swift's thin profile should not impair the performance of pressure redistribution mattresses, and can therefore remain beneath mattresses, and can therefore remain beneath mattresses, and can therefore remain beneath mattresses.

**FEATURES & BENEFITS OF ULTRASLIDE:**

- Central low-friction panel significantly reduces resistance when used in conjunction with Swift.
- Carbon fibers reduce static build-up.
- Special, stretch Ultra-Knit construction provides a smooth surface and accommodates a wide range of healthcare mattress sizes.
- Durable, 100% synthetic fabric ensures quick drying and longevity in demanding environments.
- Proper use should significantly reduce the risk of neck, shoulder and back injuries caused by repositioning.
- Available in various sizes and colors.

**USAGE GUIDELINES FOR SWIFT ULTRASLIDE SYSTEM:**

- Place Swift UltraSlide System in the bed. If hips are elevated, the surface will slide down by force of gravity.
- Position patient/resident's hips in the bend of the knee to prevent patient/resident from sliding down mattress.
- Follow appropriate protocol (refer to usage guidelines for Swift).

**BREATHABILITY**

- Reduces the risk of heat and moisture build-up under the patient/resident, enhancing comfort.

**LOAD FORCE TEST (Lab & Hospital Tested)**

**Objective:** To determine loadforce required to reposition 200 lbs on a hospital bed using a fixed apparatus.

**Conclusion:** Swift UltraSlide System reduces the force required to reposition a patient/resident by 60%, thereby reducing the overall strain on the caregiver.

**ltre: The Swift Slider can be washed along with regular bed linens.**
USAGE GUIDELINES FOR THE SWIFT SLIDER:

- Ensure brakes of bed are on.
- Place pillow at head of bed to avoid accidental head injury.
- Place Swift on bed with low-friction taffeta panel down; place incontinence pad on top of Swift if needed.
- Place patient/resident centrally on white Swift surface. The central panel should support patient/resident from neck to just below the buttocks.
- Bend patient/resident’s knees to protect heels from being dragged across linens.
- Place patient/resident in correct position as per “certain” upon high level.
- There should be a caregiver on each side of bed. Each holds Swift with two hands — one at shoulder height and one at hip height.
- To move patient/resident, gather Swift as close as possible to patient/resident’s body; grasp by available sliding sheet.

Please remember:
- We strongly advise against using Swift for lifting.

MOVING IN THE RIGHT DIRECTION!
and support your no-lift policy!

Implementing the standard use of this repositioner will create a safer healthcare environment for caregivers, ensure the comfort and safety of patients/residents, and support your no-lift policy!

Who is Swift for?

- Facilities dealing with staff injuries to arm/hand or back, as a result of lifting or repositioning patients/residents
- Personnel using bedpads to reposition patients/residents
- Patients/residents not fully benefiting from the desired effects of their pressure redistribution surfaces due to unnecessary layering of products
- Patients/residents requiring assistance with bed mobility
- Healthcare facilities with budgetary constraints

MIP recognizes that manual repositioning exposes caregivers to increased risk of neck, shoulder, and back injuries. That's why we have developed the Swift Sliders, a cost-effective, low-friction taffeta repositioner intended to allow caregivers to safely and easily perform handling tasks with little physical strain.

We have developed the Swift Slider, a shoulder, and back injuries. That's why MIP has developed UltraSlide, a fitted bottom sheet modified to act as a slide sheet, to be used together with Swift UltraSlide. Used individually or together, the two parts of the Swift Ultraslide System reduce the force required to turn or reposition bed-bound patients/residents.

Who is Swift for?

- Facilities dealing with staff injuries to arm/hand or back, as a result of lifting or repositioning patients/residents
- Personnel using bedpads to reposition patients/residents
- Patients/residents not fully benefiting from the desired effects of their pressure redistribution surfaces due to unnecessary layering of products
- Patients/residents requiring assistance with bed mobility
- Healthcare facilities with budgetary constraints

- Also available in various and stretchier sizes

Usage Guidelines for Swift Ultraslide System

- Place UltraSlide over mattress, as you would a normal fitted sheet
- Place Swift UltraSlide across mattress, with blue sides facing each other
- Position Swift so that it supports shoulder to hip area
- Reposition patient/residents using appropriate protocol (refer to usage guidelines for Swift)

Note:

- If head of bed needs to be elevated, raise knees to prevent patient/resident from sliding down mattress
- Position patient/resident’s hips in bend of bed. If hips go above that zone, patient/resident will slide down by force of gravity

Conclusion:
Swift Ultraslide System reduces the force required to reposition a patient/resident in bed by 80%, therefore reducing the overall strain on the caregiver.

BREATHEABILITY reduces the risk of heat and moisture build-up under the patient/resident, enhancing comfort.

PRESSURE MAPPING

Smile’s thin profile should not impair the performance of pressure redistribution mattresses, and can therefore remain beneath patient/residents at all times – so it’s always there when you need it.

SWIT UltraSlide System

One more advantage over any other occupation or industry, nursing personnel file for the highest number of occupational injuries related to back pain (National Institute for Occupational Safety and Health). In order to prevent such injuries, MIP has developed UltraSlide, a fitted bottom sheet modified with a low friction panel down the center to be used together with Swift. UltraSlide should be used when patient/residents have little or no mobility and require extensive or total assistance for repositioning in bed.

FEATURES & BENEFITS OF ULTRASLIDE:
- Central low-friction panel significantly reduces resistance when used in conjunction with Swift.
- Carbon fibers reduce static build-up.
- Special, stretch Ultra Knit construction provides a smooth surface and accommodates a wide range of healthcare mattress sizes.
- Durable, 100% synthetic fabric ensures quick drying and longevity in demanding environments.
- Proper use should significantly reduce the risk of neck, shoulder and back injuries caused by repositioning.
- Also available in bariatric and stretcher sizes.
USAGE GUIDELINES FOR THE SWIFT SLIDER:

- Ensure brakes of bed are on.
- Place pillow at head of bed to avoid accidental head injury.
- Place Swift on bed with low-friction taffeta panel down; place incontinence pad at top of Swift if needed.
- Position patient/resident centrally or white Swift taffeta. The centerpaw should never be placed between the buttocks.
- Bend patient/resident's knees to protect heels from being dragged across linens.
- When possible, bed should be at caregivers' upper thigh level.
- There should be a caregiver on each side of bed. Each holds Swift with two hands - one at shoulder height and one at hip height.
- Monitor patient/resident to ensure they are at the correct position.
- Ensure patient/resident is repositioned at the correct time.
- Repositioning should be done in a controlled manner.

Plase remember:
- We strongly advise against using Swift for lifting.
